The sequences are isolated from a cDNA lbrary made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detectinal diagnosing, staging, monitoring, prognosticating, preventing, or diagnosing staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastritis, leiomyoma, polyps, Crohn's disease, ulcerative colitis, pantreatitis.

of which, in non-colon tissue samples, can be used as indication of colon cancer metastasis

Slaim 1: Fig 4: 60pp; English.

13 CDNA clones (74580-92), most of them partial clones, correspond to human colon specific genes, designated CSG1, CSG2, etc., that creaming the primarily expressed in tissues derived from the colon. CSG7 and CSG10 show reduced expression in colon cancer cells as compared to that in normal cells; the remaining genes are overexpressed in colon cancer. The partial cDNA sequences can be used to isolate full-length clones and genomic clones including the complete gene.

CSG nucleic acids can be used to produce CSG polypeptides (see also w06545-53) in transformed host cells, as probes to detect disorders of the colon, partic. colon cancer and colon cancer metastasis, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EST
V16668-81 represent polynucleotide sequences of partial or full-lengt cDNA clones of colon-specific genes. The polynucleotides can be used as probes to detect expression of the corresponding human genes, e.g. diagnostic assays for detecting micrometastases of colon cancer. Recombinant cells containing the polynucleotides can be used to produce the polypeptides, in order that antibodies can be raised and used in further screening or diagnostics. 173 G; 107 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1: Pages 90-91; 116pp; English.
V63504-15 represent a set of contiguous and partially overlapping Essequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting,

Claim 1; Page 91; 116pp; English.
V63504-15 represent a set of contiguous and partially overlapping EST sequences designated CS141. The sequences are isolated from a CDNA library made from gastrointestinal tract tumnour and normal tissues.
The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, disponsing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric coller, gastritis, leiomyoma, polyps, crohn's disease, ulcerative collis, 7f R:

W63504-15 represent a set of contiguous and partially overlapping E v63504-15 represent a set of contiguous and partially overlapping E sequences designated CS141. The sequences are isolated from a CDNA library made from gastrointestinal tract tumour and normal tissues. The methods and products can be used in detecting, disorders. The methods and products can be used in detecting, disposing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastritis, lelomyoma, polyps, Crohn's disease, ulceraive collits, pantreatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       nseq

Claim 1; Pages 91-92; 116pp; English.
V63504-15 represent a set of contiguous and partially overlapping EST sequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, disonosing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastrointestinal tract cancers, Crohn's disease, ulcerative collits, pantreathis; leiomyoma, polyps, Crohn's disease, ulcerative collits, pantreathis; leiomyoma, polyps, Sequence 187 BP; 35 A; 42 C; 74 G; 33 T;
                                                                                                              wew gastrointestinal tract specific polynucleotides, CS141 - used develop products for the diagnosis and treatment of e.g. cancers, gastric ulcer, gastritis, Crohn's disease, ulcerative colitis or parcreatitis

                                                                                                                                                                                                                                                      Barret's esophagus;
                   V63504-15 represent a set of contiguous and partially overlapping EST sequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the

                                                                                                                                                                                                                                                                                                                  10-APR-1991 (first entry)
DNA fragment contg. streptomycin resistance gene and its regulatory sequence from Streptomyces griseus 4-1 strain (FERM BP-1198).
Antibiotic-resistance; selection marker; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Fig 3; 41pp; Japanese.

The DNA fragment can be inserted into an actinomycetes plasmid vector (e.g. pIJ720) to give a hybrid plasmid which may be used streptomycin resistance selection marker.

Torond on computer readable medium and used in the production of anti-S.aureus vaccines
anti-S.aureus vaccines

Claim 1; Page 1531-1532; 3271pp; English.

This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelld infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used contrained on the community readable.

Communion readable medium surgicals a primers or probes for isolating communion readable.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the sequence listing in the specification. They are included to maintain the nucleotide numbering given in the specification for this DNA sequence"

Claim 4; Page 104; 142pp; English.
This sequence represents a nucleic acid molecule designated Gene 4 from the separate of the page 104; 142pp; English and Proceed as corrected human protein. This gene maps to chromosome 4 and is abundantly expressed in parathyroid tumour. It is useful for diagnosis and treatment of disorders of the nervous system and the protein products are useful in modulating calcium metabolism.
The invention relates to 20 novel genes and their fragments (V69611 to V69630) and corresponding secreted proteins (W83931 to W83950) which are

useful for preventing, treating or ameliorating medical conditions e.g.

by protein of gene therapy. Also pathological conditions can be diagnosed
by determining the amount of the new polypeptides in a sample or by
determining the presence of mutations in the polynucleotides. Specific
uses are based on which tissues they are most highly expressed in, and
include developing products for the diagnosis or treatment of central
nervous system (CNS) and immune system diseases, reproductive disorders,
cancers, congenital malformations, degenerative diseases, traums,
inflammatory disease, neoplasia, metabolic disorders, diseases in testes,
inflammatory disease, rhabdomyosarcoma and disorders of the endocrine
system or other endocrinopathies, e.g. endocrine polyglandular syndrome,
endocrinoma, and endocrine ophthalmopathy, osteoclastoma and other bone
cendocrinoma, and endocrine ophthalmopathy, osteoclastoma and other bone
cendocling disorders, bacterial infections and sepsis. The polypeptides
are also useful for identifying their binding partners.

The first coding sequence and second coding sequence construction. The first coding sequence and second coding sequence coding for path subunit of human IL-12 and a sequence coding for path subunit of human IL-12. The plasmids are used for therapeutic gene delivery, especially for treating asthma and cancer. They are also useful as adjuvants for vaccines. IL-12 is known to stimulate natural killer cells, to promote maturation of cytotoxic T cells and to induce cytokine production by these cells. They stimulate some cancers, allergies and asthma. Co-ordinated expression of two subunits from a single plasmid is now possible, avoiding the difficulties associated with transfection with two separate plasmids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This DNA encodes a human interleukin-12 (IL-12) p40 subunit. This is used in the construction of plasmid for expressing recombinant eukaryotic genes. The plasmid comprises a first transcription unit comprising control sequences linked, in order, to a 5'-untranslated region (UTR),
single xylanase B domain, was obtd. by genomic walking PCR of DNA from extreme thermophilic strain TG456 (CBS 213.94), isolated from a New Zealand hot spring. The gene can be inserted into a vector and used for the prodn. of recombinant xylanase B in microbial host cells, esp. Escherichia coli.

A composite CDNA sequence (T30309) codes for the human transcription factor, SOX-9 (R97646). It was deduced from cDNA clones obtd. from a testis CDNA inhibrary using a SOXA HMG (high mobility gp.) probe. The gene appears to play a role in skeletal development. It has been mapped to chromosome 17 within a region which contains CMPD!, the locus for camponelic dysplasia (CD). Alterations in SOX-9 can cause both CD and male to female sex reversal. The cDNA can be used in the prepn. of recombinant SOX-9 polypeptide. DNA or recombinant protein may be injected into joint tissue for treatment of cartilage or bone damage. SOX-9 can also be used as a tool for studying bone formation and sex determination. Sequence 3934 BP; 966 A; 1100 C; 901 G; 967 T;

* NOTE: This is a 'working draft' sequence. It currently consists of 53 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                f unknown length

Center project name: H_GS146J04

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions. all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by This sequence was finished as follows unless otherwise noted:

restriction diqest.

MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov, or see http://genome.wustl.edu/gsc

This clone is from the first BAC library from Genome Systems, Inc (http://www.genomesystems.com). Cell line: lymphoblastoid SOURCE INFORMATION:

pBeloBAC Haplotypes:

The actual start of this clone is at base position 1 of GS1-146J4; actual end is at 132319 of GS1-146J4. Selection: chloramphenicol NEIGHBORING SEQUENCE INFORMATION:

Submitted (24-FEB-1999) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. Louis, MO 63108, USA

On Mar 1, 1999 this sequence version replaced gi:4263454.

* NOTE: This is a 'working draft' sequence. It currently

* Consists of 19 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                            arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                    Center project name: H_NH0475023.

* NOTE: This is a "working draft' sequence. It currently consists of 53 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         length

```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

Web site: http://genome.wustl.edu/gsc Contact: sapiens@watson.wustl.edu

Center code: WUGSC

Center project name: H_GS146J04

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov, or see http://genome.wustl.edu/gsc

This clone is from the first BAC library from Genome Systems, Inc. (http://www.genomesystems.com). SOURCE INFORMATION:

It currently consists of 30 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 contig of 784 bp in length gap of unknown length contig of 794 bp in length gap of unknown length contig of 806 bp in length gap of unknown length contig of 798 bp in length gap of unknown length gap of unknown length gap of unknown length contig of 668 bp in length gap of unknown length contig of 692 bp in length gap of unknown length gap of unknown length contig of 1221 bp in length gap of unknown length gap of unknown length contig of 1221 bp in length gap of unknown length contig of 1321 bp in length gap of unknown length contig of 1314 bp in length gap of unknown length contig of 1314 bp in length gap of unknown length gap of unknown length contig of 803 bp in length gap of unknown length

On Feb 16, 2000 this sequence version replaced gi:6911686.

IMPORTANIT This sequence is unifinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate segments. Contig_ID: 01063 Length: 50802bp

On Feb 16, 2000 this sequence version replaced gi:6977930.

IMPORTANT: This sequence is unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate segments. Contig_ID: 00059 Length: 1135bp Contig_ID: 01376 Length: 1132bp Contig_ID: 01376 Length: 1132bp Contig_ID: 01376 Length: 1132bp Contig_ID: 03101 Length: 1552bp Contig_ID: 03101 Length: 1502bp Contig_ID: 03101 Length: 1502bp Contig_ID: 03101 Length: 1502bp Contig_ID: 03101 Length: 48632bp Contig_ID: 03101 Length: 48632bp Contig_ID: 03101 Length: 48632bp contig_ID: 03101 Length: 48632bp contig_ID: 03101 Length: 48034pp.

* NOTE: This is a 'working draft' sequence record is anbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will

* be preserved.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

On Feb 16, 2000 this sequence version replaced gi:6911627.

IMPORTANT: This sequence version replaced gi:6911627.

IMPORTANT: This sequence work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate segments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   131:145-150). The sequence of the packaged vector was determined by Peter Myler and Ken Stuart at Seattle Biomedical Research Institute, and is available as accession number U5931.

The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous.

The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bothe(G., Pohl.T., Ivens, A.C., Lawson, D., Murphy, L., Quail, M., Rajandream, M.A. and Barrell, B.G.                                                                                                                                                                                                                                                                                                                                                                                                           CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (acg) which is preceded by a stretch of pyrimidines or part of a Kozak sequence. If this cannot be identified we choose the most upstream initiation codon.
the Hexamer program which was written by Richard Durbin as an integral part of the ACEDB-based analysis tools for the C-elegans Genome Sequencing Project. The program calculates the 109-11Kellhood score for a given DNA segment based on the frequency of 6-mers, normalised for the base-pair composition of the genome. The program was trained using a fasta file of confirmed Leismania major coding sequences (CDS), i.e. from ATG start codon to the stop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   complement(1111. .3867)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Transmembrane domains were predicted as implemented at the TMHMM server: http://www.cbs.dtu.dk/services/TMHMM-1.0/
IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions.

Cosmid L4768 does not overlap any sequenced cosmids to date.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note="region of BLASTN similarity to bases 11104. .1
